

Important Treatment of **Timber Doors**

- Your Timber Door is supplied to you with the Manufacturer's factory finish.
- Timber products that are supplied untreated, unfinished are susceptible to expansions and contractions caused by variances in both temperate and humidity and will carry no warranty.
- Due to the varied climate conditions in South Africa, it is essential for your Timber door to be treated with a timber sealant within 2 (two) weeks of installation, as per sealant manufacturer's instruction and thereafter on a regular basis. In the first year we would recommend treatment every 3 to 4 months and subsequently twice a year.
- Failure to comply with these instructions may result in splitting or cracking of timber, for which the manufacturer can not be held responsible.
- Compliance with the above will ensure that your Timber Door will last for many years.

DO NOT VARNISH THE DOOR!

Ask your sales representative for recommended Timber Treatment products available from Doors Galore.
